

BUEHLER® Cast N' Vac CASTABLE VACUUM SYSTEM

- Removes Trapped Air from Mounting Material
- Economical and Compact Single Sample System
- Built-in Vacuum Pump and Gauge
- CE Approved
- 2-Year Warranty

BUEHLER

Photomicrograph of a Thermal Spray, Nickel-Graphite coating, 200X BF. Using the Cast N' Vac, large voids (porosity) are filled with epoxy during vacuum impregnation. This process assists in maintaining the fragile, as-deposited coating integrity during grinding and polishing.

Photomicrograph of the same Thermal Spray, Nickel-Graphite coating with-out vacuum impregnation. These porous materials are prone to having constituents "pulled-out" during routine specimen preparation, potentially causing erroneous porosity analysis.

The BUEHLER® Cast N' Vac Castable Vacuum System is a self-contained vacuum impregnation system for use with castable epoxy resins. The Cast N' Vac removes trapped air from mounting material. Without the presence of air, the mounting compound fills the sample pores and eliminates the gaps between the sample and the compound. Edge retention is enhanced and brittle samples are supported during the grinding/polishing process. The system comes complete with a small quantity of mixing supplies, sample holding cups, and epoxy supply tubes.

Specifications

20-3510-160 Cast N' Vac Castable Vacuum System complete with built-in vacuum pump rated to -10 p.s.i (-.7 bar), vacuum gauge, vacuum chamber for single sample impregnation, recessed cup holder, silicone stopper, epoxy supply tubes (5), hose clamp (1), removable recessed disc (1) 1¼", phenolic Ring Forms (5) 1¼", paper measuring cups (5), wooden stir sticks (5), and operations manual. For 115V/60Hz/1 phase operation.

Accessories and Consumables

Ring Forms, Phenolic
