The HandiMet® 2 Roll Grinder offers the microstructural analyst an exceptionally convenient and economical instrument for manual grinding applications. The HandiMet 2 provides a self-contained four-stage grinding station with controlled water flow for lubrication and flushing. Unique water activated clamping holds abrasive papers firmly in position during grinding. No special clamps or hold-downs are required. Continuous water flush removes grinding residue from the abrasive grit. Work surfaces are pitched downward from back to front for operator comfort. For fast, economical, top-quality manual grinding of metallographic samples, specify the new HandiMet 2 for your laboratory.
